LEMFÖRDER ServicePack

THE COMPLETE PACKAGE FOR PERFECT ASSEMBLY

Any worn nuts or bolts that can no longer be properly tightened represent a risk if reused and in no way offset the cost of a new part.

Worn parts are no longer as effective. That's why vehicle manufacturers generally recommend replacing all worn hardware when installing spare parts.

The ServicePack for LEMFÖRDER products contains all necessary hardware required for replacing parts, at OE quality. This includes all worn hardware that secures adjacent components which also have to be removed during the repair, in addition to the spare part. If required, even adjustment plates and eccentric screws.

This ensures that work can be completed quickly and professionally while following the manufacturer's exact instructions. It also gives you peace of mind that everything has been done to ensure vehicle safety and performance.

Most LEMFÖRDER products already come with the proper installation hardware. The ServicePack provides extra hardware, if needed.

There is a wide range of LEMFÖRDER ServicePacks replacing worn steering and suspension parts in many models, ranging from Audi, BMW, Citroën, FIAT, Ford, Mercedes-Benz, SEAT, Škoda and Volkswagen.

A dedicated LEMFÖRDER team ensures that new ServicePacks are constantly being added.

Details on current products and product lines can be found in our online catalog or in TecDoc under the key word criteria.

BECAUSE THE SUM IS ONLY AS GOOD AS ITS WEAKEST PART.

LEMFÖRDER ALSO FOCUSES ON OE STANDARDS FOR ITS HARDWARE.

ALL PARTS ARE MANUFACTURED TO MATCH THE SPECIFICATION DEFINED BY THE VEHICLE MANUFACTURERS TO MAINTAIN OPTIMIZED VEHICLE PERFORMANCE AFTER SERVICING.

WHY? THIS IS DONE NOT ONLY IN THE INTEREST OF PASSENGER'S SAFETY BUT ALSO TO PROTECT WORKSHOPS. BECAUSE WORKSHOP IS ULTIMATELY LIABLE FOR ALL SERVICE WORK.

Service work involving steering and suspension parts has a significant influence on the vehicle's safety and should be performed to the highest possible standard.
