# TECHNICAL REPORT

Different type of notch on  
cylinder head gasket for  
VAG group 1.9-2.0 TDI  
engines

## REASON

Inform customer about the **different type of notches** that we can find on the part numbers of cylinder head gasket available for the group VAG engines 1.9-2.0.

## DESCRIPTION

The 1.9-2.0 TDI engines were a great acceptance and they were installed on the group VAG models from 1996 to 2010, when they were substituted by the moderns 1.6-2.0 TDI.

During their years of commercialization, these engines have fitted **different part numbers of head gasket** depending on model, year, engine code, and power output.

On these cylinder head gasket, we can find two different kind of notch, one of them with **circular shape** and the other with **oval shape**.

The **circular notches** indicate the **thickness** of the cylinder head gasket, while the **oval notches indicate other information** not related to the thickness of the gasket, so they are not important when choosing the appropriate gasket.

# Notches	1	2	3
101211X0	 10121100	 10121110	 10121120
101212X0	 10121200	 10121210	 10121220
101670X0	 10167000	 10167010	 10167020
